Data: PREVIEW on Jun 2025 - Sep 2026 only.

Method: tests/backtest_live_loop_trump_regime.py replays the production Apex entry engine and the production exit chain (MicroExitController, breakeven and TP1 ratchets, structure invalidation, macro spike harvest, Friday flatten) on 1-minute candles, with a \$0.30 spread and \$0.10 slippage modelled, the live lot ladder, and the daily withdrawal rule (30% of a profitable day above \$100 equity, 50% above \$1,000, 70% above \$5,000). It is not a guarantee: broker fills, latency and slippage on tight stops can be worse than modelled, and results depend on the data window.
